

Receiver Group

Designed for performance

Waikato receiver groups are made to the highest standards to ensure effective vacuum, milking and washing performance.

These essential parts of the milking system are manufactured from high grade stainless steel by our own stainless steel fabrication division to the highest standards and with absolute precision. The receiver group is immaculately welded for exceptional performance.

The receiver group consists of several key parts as follows. The receiver collects the milk from the milk line and separates the milk and air. The sanitary trap prevents cross-contamination and is part of an effective cleaning system. The milk pump enables the flow of milk to the milk tank.

Compatible with: Centrus, Orbit, Revolution, Supa4, Loopline & Lowline

FEATURES:

- Perspex dome
- Stainless steel body
- Wide range of port configurations available

BENEFITS:

- Excellent vacuum, milking and washing routines
- Quality ensures peace of mind
- Excellent integration

TECH SPECS:

SIZES: 60L / 90L / 120L
MATERIAL: Stainless steel with Perspex domes
