

ONE PERSON ROTARY

Increase your milking efficiency, performance and productivity with a one person rotary milking system.

MILK MORE EFFICIENTLY THAN A ROBOT, WITH ONE PERSON

If you're a smaller family farm looking to maximise your gains and quality family time together, a one person rotary milking solution can be configured to take into account your current scale, herd size, cow breed, and your future plans.

A one person rotary milking solution allows you to milk 150 cows per hour with the capacity to expand with no additional costs as your herd increases in the future. It also means you'll be milking more efficiently than a robot, for the same installation cost as 1.5 robots.

Featuring a specific suite of automation technology, including automatic pre and post dipping and automatic stripping, having a single operator will save time, reduce labour costs and making your milking more enjoyable.

Designed to maximise cow comfort, a one person rotary allows the operator to focus on the requirements of individual cows and adjust the milking process accordingly. The system also helps the operator to identify any potential issues quickly to reduce the stress on cows and improve milk quality.

Milk in less time, with less labour

Milk 150 cows per hour more efficiently than a robot, for the same cost as 1.5 robots

Automated for efficiency

The systems feature a suite of automation technology to maximise your efficiency, performance and productivity

Better for farmers, better for cows

The user-friendly system provides a quiet, comfortable and stress-free milking environment for the operator and cows.
