

COW RESTRAINTS COW RETENTION

Restrain your cows automatically and save time and money.

MAKE COW RESTRAINT AND MANAGEMENT EASIER, AUTOMATICALLY

Cow Restraints are automatically lowered and raised, when used in conjunction with ECR-S or ECR Plus cup removers, making it easier to manage animals on your rotary platform.

Activated by a hydraulic ram, the Cow Restraints drop automatically after cupping, to keep the cow in the stall, and lift when the cow finishes milking allowing her to exit the platform.

If the cups are kicked off, the restraint stays down so the cow is presented back to the operator for inspection.

Waikato Cow Restraints are made from flexible but durable plastic and can easily be retrofitted into existing farm dairies.

ADVANTAGES

Cow Restraints save on labour by allowing you to restrain your cows automatically.

Save time and money

Saves labour by eliminating the need for an operator at Cups Off

Optional lower setting only

Can be set to only lower the Cow Restraints if needed (alarms or still milking at bridge)

Customisable alarms

Select which alarms will retain an animal to suit your farm's milking procedures
