

ORBIT CONCRETE

ROTARY MILKING SYSTEMS

ROBUST SYSTEMS FOR EFFICIENT MILKING

A clean, fast milking environment, maximising parlour throughput to elevate the value of your dairy operation through precision dairy farming

INCREASED EFFICIENCY, REDUCED LABOUR COSTS -ORBITS ARE SOLID, PROVEN AND RELIABLE

Orbit Concrete Rotary Milking Systems have been serving dairy farms around the world for nearly quarter of a century and continue to be a popular choice among family orientated farms as well as commercial dairy operations.

The strength and integrity of an Orbit Concrete Rotary Milking System has earned a reputation for reliability, longevity and proven technology, delivering excellent return on investment.

An Orbit is designed to provide a safe, clean and fast milking environment for both animals and operator. This ensures cow flow on and off the platform is excellent and the milking equipment is easily accessible for the operator, both elements working together to optimise milking time and milk quality.

Orbit Rotary Milking Systems are designed to integrate seamlessly with the range of Waikato Milking Systems automation technology. The Orbit System has been designed to be fully upgradable, which means new automation options can be added when the time is right, whether that be to meet herd expansion plans or simply when the budget allows.

ADVANTAGES

Easy to install, easy to use

The Orbit's SmartFIT mounting systems allows the milking machine equipment to be quickly and accurately attached to the rotary platform. Bolting on instead of welding reduces chance of corrosion.

Superior protection of milking equipment

The 2.7m width of the Orbit platform offers excellent protection for milking and electronic equipment. The deck slopes outwards which ensures effluent runs to the outside of the platform and an effective lubrication system keeps the 100mm concrete deck turning, reliably, at each milking time.

Fast, quiet and efficient milking

The Orbit's design ensures excellent cow flow at entry and exit points providing a safe and calm working environment for the operator and animals. Unique deck ports allow for ideal cluster alignment and easy cluster application.

Full compatibility

The Orbit is compatible with the range of Waikato Milking Systems automation technology to help optimise your dairy operation. Our Research and Development team continues to test new automation equipment to make further advances in efficiency and productivity for dairy farms.

ORBIT 2500 SOLID, PROVEN AND RELIABLE

The Orbit 2500 is an entry-level milking system without automation that utilises solid, proven technology to provide you with a clean and efficient milking environment.

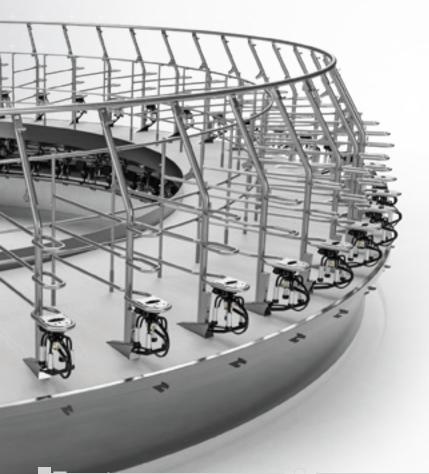

Recognised for its strength and integrity, the design of the Orbit rotary concrete platform ensures excellent cow flow on and off the platform and provides easy access to milking equipment.

The platform is supplied with one operator console that includes safety devices and protection equipment, and the SmartFIT mounting systems allow for fast installation of equipment and easy maintenance.

The Orbit 2500 milking system is future-proofed, so it can be upgraded seamlessly with Waikato Milking Systems' dairy automation technology to increase your productivity and reduce labour costs when the time suits.

ADVANTAGES

The Orbit 2500 provides a solid, proven and reliable base model milking system to improve your milking parlour efficiency.

A quiet, efficient milking environment An easy-to-use milking platform utilising solid, proven technology for quiet and efficient milking.

Excellent cow flow The outward sloping deck allows for easy entry and exit, while ensuring effluent runs to the outside of the platform.

Designed for protection and efficiency The wide deck provides protection for machinery, and the unique deck ports allow for better cluster alignment and application.

WHAT'S INCLUDED:

Platform:

Rated Operating Duty per Day = 12 hrs

Standard Stall width (875mm c/c outer rim)

Standard Galvanised Stallwork

Double Beam with nylon rollers at approx. 650mm spacing

100mm reinforced Concrete deck

Drive Units & Cups On Controls

Heavy duty galvanised RSJ sub frame

Extra wide 2.7m platform

Automatic lubrication system

Full circumference control and emergency stop ropes

Entry crush switch

Entry D-Gate Assembly

Full circumference rump and kick rail

Milking System:

Milking point: Clusters, Rubberware, Pulsators

Milk Handling: Milk Pump, Milk Filter, Plate Heat Exchanger*, Chilling System*

Vacuum System: Vacuum pump, Vacuum Controller, Rotary Swivel, Interceptor

CIP / Wash System: Wash Tub, Jetters, Recirculation Lines

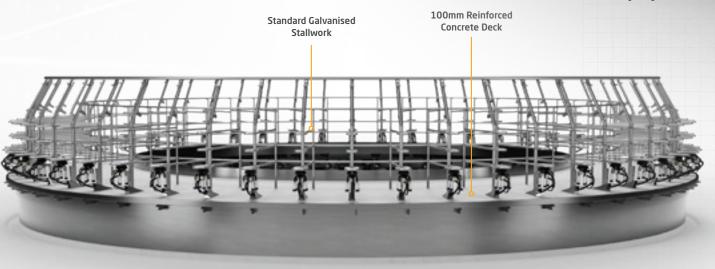

Stainless Steel Componentry: Rolled milk, pulsator & wash Lines, Receiver, Sanitary Trap

* Some specifications may change depending on regional requirements

Milking Clusters Rubberware

Heavy Duty Sub Frame

AKATO

ORBIT 5500 INCREASED EFFICIENCY, REDUCED LABOUR COSTS

The Orbit 5500 builds on the entry-level milking system with the introduction of automated cluster removal to increase efficiency and reduce labour costs.

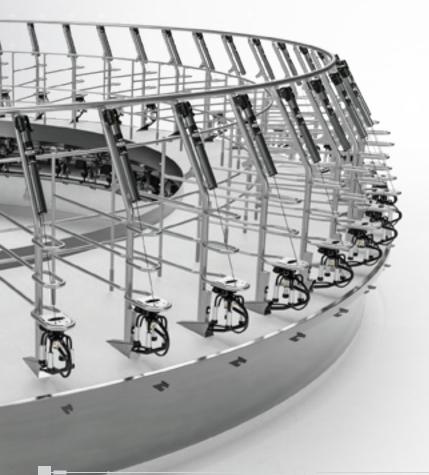

The Orbit rotary concrete milking system is known for its strength and integrity, and has been designed to ensure excellent cow flow on and off the platform.

Utilising solid, proven technology the Orbit 5500 milking system provides you with a quiet, clean and efficient milking environment with easy access to milking equipment.

One operator control console is supplied with the platform and includes safety devices and protection equipment, while SmartFIT mounting systems make equipment installation quicker and maintenance easier.

ADVANTAGES

The Orbit 5500 provides entry-level automation to increase your milking efficiency and reduce labour costs.

Excellent cow flow The outward sloping deck allows for easy entry and exit, while ensuring manure runs to the outside of the platform.

Designed for protection and efficiency The wide deck provides protection for machinery, and the unique deck ports allow for better cluster alignment and application.

A clean milk out and reduced labour Labour-saving automatic cup removers offer a consistent milk out, while the User Display gives the operator real-time milking information and alerts.

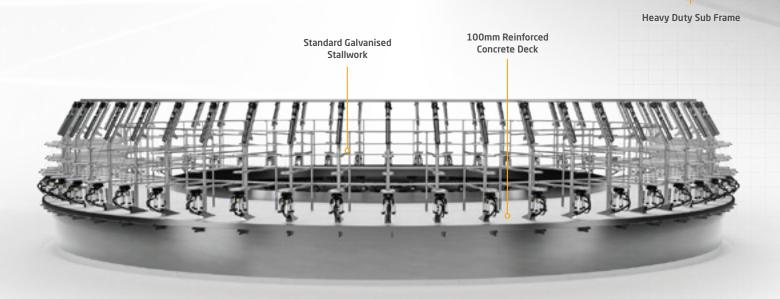

WHAT'S INCLUDED:

Platform:	
Rated Operating Duty per Day = 12 hrs	ACR's / Detachers
Standard Stall width (875mm c/c outer rim)	
Standard Galvanised Stallwork	100
Double Beam with nylon rollers at approx. 650mm spacing	IST IT
100mm reinforced Concrete deck	
Drive Units & Cups On Controls	dCH_////////////////////////////////////
Heavy duty galvanised sub frame	
Extra wide 2.7m platform	MANT NUR 2
Automatic lubrication system	
Full circumference control and emergency stop ropes	
Entry crush switch	
Entry D-Gate Assembly	
Full circumference rump and kick rail	
Milking System:	
Milking point: Clusters, Rubberware, Pulsators	
Milk Handling: Milk Pump, Milk Filter, Plate Heat Exchanger*, Chilling System*	1 00
Vacuum System: Vacuum pump, Vacuum Controller, Rotary Swivel, Interceptor	
CIP / Wash System: Wash Controller, Wash Tub, Jetters, Recirculation Lines	9
Stainless Steel Componentry: Rolled milk, pulsator & wash Lines, Receiver, Sanitary Trap	
Dairy + Animal Management:	

ACR's / Detachers

* Some specifications may change depending on regional requirements

Milking Clusters Rubberware WAIKATO

ORBIT 9500 MAXIMISE YOUR MILKING EFFICIENCY & PRODUCTIVITY

The Orbit 9500 milking system provides a full suite of automation technology including automatic cup removers, automatic udder health monitoring and pre-milking stimulation, and milk yield to measure and record milk volumes.

The design of the Orbit concrete rotary platform utilises solid, proven technology to provide you with a clean and efficient milking environment with easy access to milking equipment. Recognised for its strength and integrity, the Orbit 9500 milking system ensures excellent cow flow on and off the platform.

The heavy duty stallwork on the Orbit 9500 provides the next level of strength and durability for large scale 24/7 dairy operations or for operations with larger livestock. The 9500s with stainless steel heavy duty stallwork is resistant to chemical spray and effluent and is easier to clean and maintain.

ADVANTAGES

The Orbit 9500 provides a full suite of automation to increase your milking efficiency and reduce labour costs.

Excellent cow flow The outward sloping deck allows for easy entry and exit, while ensuring manure runs to the outside of the platform.

Increase efficiency and reduce labour costs A full automation suite gives real-time data along with animal health and performance monitoring.

(Far)

Strong & durable extra comfort width stallwork Designed for use in parlours with larger stock, providing a level of strength and durability for 24/7 milking.

Also available in:

9500s

Heavy duty stainless steel stallwork

WH	AT'S	INCL	UDED:

Rated Operating Duty per Day = 24 hrs

100mm reinforced Concrete deck Drive Units & Cups On Controls Heavy duty galvanised sub frame

Full circumference rump and kick rail

Milking point: Clusters, Rubberware, Pulsators

CIP / Wash System: Wash Tub, Jetters, Recirculation Lines

Extra wide 2.7m platform Automatic lubrication system

Entry crush switch Entry D-Gate Assembly

Dairy + Animal Management: ACR's / Detachers

Milk Metering

Milking Point User Display

Dairy Management System

Mastitis and Udder Health Detection

Milking System:

Extra Comfort Bail Width (980mm c/c outer rim)

Full circumference control and emergency stop rope

Heavy Duty Galvanised stallwork (or optional Stainless Steel)

Double Beam with nylon rollers to suit 24/7 systems, at approx. 450mm spacing

Milk Handling: Milk Pump, Milk Filter, Plate Heat Exchanger*, Chilling System* Vacuum System: Vacuum pump, Vacuum Controller, Rotary Swivel, Interceptor

Stainless Steel Componentry: Rolled milk, pulsator & wash Lines, Receiver, Sanitary Trap

Platform:

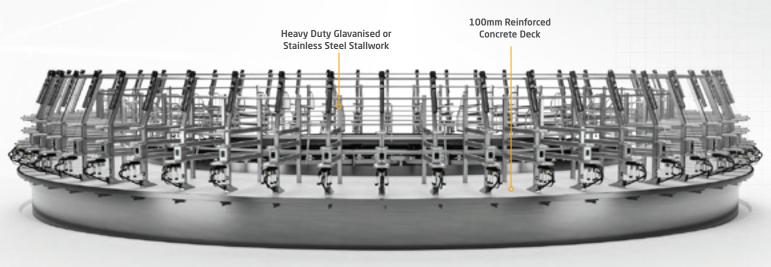

Heavy Duty Sub Frame

ACR's / Detachers

AIKATO

* Some specifications may change depending on regional requirements

* Also available as a 9500s which has Stainless Steel stallwork

Milking Clusters Rubberware

A solution that revolves around their operational requirements

When Kiwitahi Pastoral were looking for a new rotary milking system for one of their four dairy farms in the Waikato, they began researching platform options. The company had purchased the 303-hectare, Oreipunga Road dairy farm near Cambridge in 2018, and began planning its redevelopment the following year. The aim was to replace an old 33-aside Herringbone system with a modern rotary milking plant, located more centrally on the property to manage the farm's 700 cows.

As a part of the company's research, co-owner Jason Trower said they were focussed on the types of platforms that were available on the market. "The driving factor for us was the concept of having a platform that offered a total solution for the way we wanted to operate the dairy farm." says Jason, "We shortlisted two providers and Waikato Milking Systems were one of them".

After Jason Trower and Duncan Enersen visited various dairy farms to compare the design and performance of the two shortlisted platform options, the decision was made to install a Waikato Milking Systems 54-point Orbit Concrete Rotary Milking System.

"There was a marked difference in the visibility across the Orbit platform deck because of the design of the bail."

says Jason. With two steel legs from the bail on the platform "rather than something solid sitting on the deck" Jason says it was a bonus from a health and safety perspective. "It makes the platform more open, so you're able to see across the deck and spot potential problems that might occur with animals getting into difficulty and address them immediately".

In Jason's view the Waikato Milking Systems shed they visited was "significantly cleaner" than the competitor, "which is also due to the open bail design. It just makes the deck more accessible and easier to clean, and to keep clean during milking". These were big consideration factors for the company, as they wanted to make the milking routine as easy as possible for their staff.

Jason and Duncan were also impressed with how all the key components of the milking system were housed under the Orbit platform, but easily accessible from the centre. "So if we ever had service or maintenance issues, it would be easier to access everything".

One of the common weak points the company has on their other existing rotary milking systems, has been the platform track and roller systems. "So our choice of platform system for the Orbit was the Waikato Milking Systems multi roller - because of its increased durability and how the design

The driving factor for us was the concept of having a platform that offered a total solution for the way we wanted to operate the dairy farm.

[PICTURED] DUNCAN ENERSEN KIWITAHI PASTORAL OPERATIONS MANAGER - WAIKATO, NEW ZEALAND

WAIK

allows you to change a roller out without having to lift the platform or jack it up" says Jason. "That got a big tick from me, a lot of thought has gone into that design aspect".

66

The open bail design helps makes the deck more accessible and easier to clean, and to keep clean during milking.

The Orbit system was commissioned in November 2020, with Jason saying, "From an operational perspective the platform has performed seamlessly, and we haven't had an issue with it from the moment it started turning".
