

WAIKATO SPRAY**ARM** AUTOMATIC **TEAT SPRAYER**

**ACCURATE AND
RELIABLE, SAVING
LABOUR COSTS**

Automate your teat spraying to reduce labour and increase efficiency to elevate the value of your dairy operation through precision dairy farming

RELIABLE, ACCURATE TEAT SPRAY SYSTEM

Waikato SprayARM **EXACT**

With over 750 systems installed worldwide the Waikato Spray ARM Exact is an accurate and reliable automatic teat spray system for your rotary parlor.

Our control system allows for pre-spray and/or post-spray units to be installed, removing expensive labor units from your operation. Excellent coverage combined with an affordable system giving you a possible 6-8 month return on investment.

Easy to install
Easy to install and inexpensive to maintain.

Reliable and precise spray pattern.
Advanced sensors accurately locate the cow.

Affordable Automation
For large, fast moving rotaries.

Waikato SprayARM **RAPID**

The Waikato Spray ARM Rapid is a game changing automatic system for large fast-moving rotaries.

Fast and effective, able to spray at speeds of down to 3.8 seconds per stall.

Waikato Spray ARM Rapid

FEATURES & BENEFITS

High quality nozzles	Less blockages, reduced maintenance costs
Accurate movable arm	Places nozzle in the correct position each time for an accurate teat spray
Patented flexible arm	Minimizes animal or machinery interference. Saving repair costs
Efficient twin spray nozzles	360 degree teat coverage
Advanced sensors and user-friendly interface	Adaptable system to customize a spray pattern for individual animals

Models available:

- **Waikato Spray Arm Exact:** Single spray arm mounted on a stationary pole. Sprays each stall as it passes. Suitable for 78 point and below. For speeds as fast as 5.5sec/stall.
- **Waikato Spray Arm Rapid Dual:** Two spray arms mounted on a stationary pole. Sprays each stall as it passes. Suitable for 80 points and above. For speeds as fast as 3.8sec/stall.

WHAT IS REQUIRED?

Rotary platforms are fitted with the our unique 'leg spreader bullet' cow positioners. This robust attachment can be supplied in polypropylene plastic. The leg spreader bullet units are bolted onto the floor of each stall. This positions the cows feet and allows easy access to the cows udder.

HOW IT WORKS

A series of advanced sensors accurately locate the cows position on the platform as she nears the exit / entry areas. This information is communicated directly to the Teatwand controller.

- If the cow is still milking
- An accurate position of where the cow is in the stall (pushing forward or leaning back)
- Platform direction and speed
- Adjustable spray patterns and timings
- Easy to use touchscreen controller
